Professional Summary

Full-stack software engineer with 3+ years of experience building scalable backend systems in Node.js, NestJS, PostgreSQL, and MongoDB. Skilled in event-driven architecture, asynchronous job processing with BullMQ/Redis, real-time features with Socket.IO, and secure payment/third-party API integrations, paired with React/Next.js front ends and AWS-based infrastructure.

Technical Skills

Languages:	Java, JavaScript, TypeScript, SQL (MySQL)
Backend:	Node.js, NestJS, Express.js, REST APIs, Apache Kafka, BullMQ, Socket.IO, JWT, OAuth 2.0, Zod
Frontend:	React.js, Next.js (App Router), Redux Toolkit, Zustand, React Query, Tailwind CSS, MUI, shadcn/ui
Databases & ORMs:	PostgreSQL, MongoDB, MySQL, Redis, TypeORM, Prisma, Mongoose
Cloud & DevOps:	AWS (EC2, Lambda, Elastic Beanstalk, Amplify, S3, Route 53, CloudFront), Docker, Git/GitHub
Tools:	Postman, VS Code, Claude Code, Cursor, Codex

Professional Experience

Full Stack Developer — SDLC Corp *August 2025 – July 2026*

- Built and maintained scalable backend modules using NestJS, PostgreSQL, TypeORM, and Redis, delivering configurable business workflows, event-driven processing, and high-performance APIs for a production platform.
- Designed configurable business-rule and reward-processing workflows, including eligibility validation, expiry handling, and automated background execution for complex application logic.
- Integrated multiple third-party platforms and external APIs, implementing secure webhook processing, request validation, callback handling, and idempotent, standardized error handling.
- Built asynchronous processing pipelines with BullMQ and Redis for scheduled jobs, notifications, payment workflows, and data synchronization, plus real-time features with Socket.IO for scalable live updates.
- Integrated payment, identity-verification, and fraud-prevention services, implementing secure transaction processing, KYC workflows, risk assessment, and audit logging.

Full Stack Developer — Umenit *July 2024 – August 2025*

- Developed scalable REST APIs with Node.js, Express.js, and MongoDB, implementing authentication, authorization, and core business logic for production applications.
- Designed optimized MongoDB aggregation pipelines to improve query performance and API response times.
- Implemented background job processing and reusable backend modules with the team to deliver secure, maintainable features.

Full Stack Developer — TechCurators *June 2023 – June 2024*

- Built and scaled TOSS, a SaaS platform, using Next.js, Node.js, and AWS, growing user engagement by 30% and reducing page load times by 40% through code-splitting, lazy loading, and efficient component architecture.
- Integrated Relevance AI, OpenAI, and LangGraph/LangChain agentic workflows to automate business processes, and deployed the platform on AWS Amplify and EC2 with 99.9% uptime under high-traffic load.
- Live: tosshq.com

Projects

Win-Win-Games & WulfGames — IGaming Platforms *React.js, Node.js, Express.js, MongoDB, Redis, REST APIs*

- Built two production-grade multiplayer iGaming platforms with secure authentication, wallet management, and real-time updates on a scalable REST API architecture.
- Developed configurable promotions, tournaments, and reward systems, integrating third-party payment, identity-verification, fraud-detection, and game-provider services.

MyScheduler *Next.js, Clerk, Prisma, NeonDB, shadcn/ui, Google Calendar API*

- Built a scheduling platform with Next.js App Router and Clerk authentication, integrating Google Calendar API for meeting booking and NeonDB/Prisma for reliable data handling.

Education

Bachelor of Technology in Computer Science — CGPA 7.8

Bansal Institute of Engineering and Technology, Lucknow, Uttar Pradesh | June 2019 – June 2023
